```

NOTICE: This sequence may not represent the entire insert of this folor. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as Compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/jsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osogawa K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genemics 51:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute (http://www.resgen.com) or Pieter de Jong (http://www.resgen.com) or Pieter de Jong (http://www.resgen.com). The clone sequenced to the left is RPI1-341H1, 2000 bp overlap; the clone sequenced to the right is RPI1-289K3. Actual start of this clone is at base position 162181 of RPI1-341H1; actual end is at base position 167227 of RPI1-461H8. NEIGHBORING SEQUENCE INFORMATION: pBACe3.6

ţ Data from AC016725 and AC017031 was used to finish this clone, AC020602. There is a tandem repeat from base position 33099 t

The proteins produced by MD-2 are capable of specifically binding the constant region of the heavy chain of IgG in the same way as neutral FC receptors. They can be used to analyse the structure and function of FC receptors, as well as in antibody production, cell culture, diagnosis and therapy. They can be used to treat disorders such as leukaemia and lymphoma, cancer and immune disorders.

Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
                                                                                                                                                                                                                                                       The sequence is that of 'SG-3 (synthetic protein G). SG-3 is capable of specifically binding the constant region of the heavy chain of 1gG in the same way as neutral Fc receptors. It can be used to analyse the structure and function of Fc receptors, as well as in antibody production, cell culture, diagnosis and therapy. They can be used to treat disorders such as leukaemia and lymphoma, cancer and immune
                                                                                                                                                     New peptide(s) which bind the Fc region of an immunoglobulin comprising a nontotal portion of the amino acid sequence of Protein A and/or Protein G

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating of sources involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Asgounces of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    46 EDKEATTAIEAASSDALEALADQTDALQSEEAAVVKADNAASDALEALADQTDALQSEEA 105

One clone, which expressed both activities, was analyzed to obtain DNA encoding the FAM-binding protein, MIG (AAR71929). The mig gene is given in AAQ89196.

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a GRAB peptide EKL 18 useful in vaccine composition. It was used to produce immunoglobulin G (1gG) antibodies specific for native GRAB protein in sheep. The peptide has a cysteine insert at the C-terminal for attachment to a hetero-bifunctional linker.
                                                                                                                                                                                                                                                                                   New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,

A phage lambda EMBL3 library of S. dysgalactiae 8215 DNA was analyzed for alpha-2-macroglobulin. BSA- and IGG-binding activity. Clone lambda-SD1, which expressed all 3 activities, was analyzed to obtain DNA encoding the SA-binding protein, MAG. The mag gene (given in 086080) encoded a 44 kba MAG protein (R71670). Recombinant, immobilized MAG was used for serum albumin affinity purification, detection and assay.
                                                                                                                                                                                                                                                                                                                            Mag gene; serum albumin binding protein; protein stabilization;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding a serum albumin binding protein - used to obtain prods. for sepns., detection, quantification, protein stabilisation or vaccine development

                                A phage lambda EMBL library of S. dysgalactiae 8215 DNA was analyzed for fast-acting alpha-2-macroglobulin (FAM)-, BSA- and IgG-binding activity. Clone lambda-SDL, which expressed all 3 activities, was analyzed to obtain DNA encoding the FAM-binding protein, MAG. The mag gene (given in Q89197) encodes a 44 kDa protein (R71929).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The analysis of the polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its bid partners are useful in medical imaging of sites expressing (II). (I) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess bioliversity and to produce other types of data and products dependent on DNA and canno acid sequences of the invention.

Conditional partner of the invention of mutations and acid sequences of the invention.

Conditional partner of the invention of mutations of the invention but was obtained in electronic format directly from MIPO are the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                    Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22; Length 422;

The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chagnostics, forensics, gene mapping, identification of mutations constitutions in the polypeptide and disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                               Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 459;

from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a GRAB peptide KKT 19 useful in vaccine composition. It was used to produce immunoglobulin G (IgG) antibodies specific for native GRAB protein in sheep. The peptide has a cysteine insert at the C-terminal for attachment to a hetero-bifunctional linker.

                                                                                                                                                                                                                      related alphazM binding procedul) from Streptococcus progenes which have the ability to bind alpha2-macroglobulin (alphaZM) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus progenes infections. The protein is also useful for purifying alphaZM from a sample. The present sequence is a GRAB peptide DSP 18 useful in vaccine composition. It was used to produce immunoglobulin G (IgG) antibodies specific for native GRAB protein in sheep. The peptide has a cysteine insert at the C-terminal for attachment to a hetero-bifunctional linker.
New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,
                                                                                                                                                                                              The patent discloses a new family of proteins termed GRAB (protein G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Protein G variant product carries active regions B1 and B2, it may be imobilised and exhibits different binding profiles. The bound protein is useful in purification and detection of Igs and framents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1..30

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective from it are used in vaccine compositions for generating a protective are useful for treating Streptococcus, pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a GRAB peptide EKL 24 useful in vaccine composition. It was used to produce immunoglobulin G (IGG) antibodies specific for native GRAB protein in sheep. The peptide has a cysteine insert at the C-terminal for attachment to a hetero-bifunctional linker.
New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gene for protein G variant of non-pathogenic streptococcus sp. allowing isolation of the protein and variants, useful as bacterial Fc receptors eg in purification and detection of Abs., screening of hybridoma clones and treatment of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expressing proteins having immunoglobulin-binding properties of protein G and derived from Streptococcus sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 105; DB 10; Length 235;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                          The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus, natibodies against GRAB are useful for treating Streptococcus, pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a fragment of GRAB protein from S, pyogenes strain SF370 corresponding to residues 34-56. This fragment is capable of binding alpha2M and useful in vaccine composition.

The construct comprises protein G' and a linking moiety for connecting the protein G' to the liposome.

Also described are: (1) a liposomal delivery vehicle comprising: (a) a liposome are: (1) a liposomal delivery vehicle comprising: (a) a liposome; and (b) a connecting moiety connected to the liposome, which specifically binds the Fc region of an antibody, for connecting the attibody to the liposome; and (2) forming a liposomal carrier comprising: (a) providing liposomal components having binding moieties, for forming a liposome; (b) providing a construct comprising a linking moiety and a connecting the liposomal accomponents and the construct and sonicating the liposomal components and the construct and sonicating the liposomal components and the construct and sonicating the liposome, for binding to the linking moiety, and to facilitate the binding between them. The binding moiety, and to facilitate the binding between them. The construct can be used for the delivery of diagnostic or therapeutic agent, e.g. antiblotics, antidepressants, cor therapeutic agent, e.g. antiblotics, antidepressants, courtenessing agents, councilly moiety provides a liposomal delivery of cytotoxic agents to maily an used particularly for the delivery of cytotoxic agents to mailgnant cells. The protein G' connecting moiety provides a liposomal delivery complex having improved the connecting moiety provides a liposomal delivery complex having improved the connecting moiety provides a liposomal delivery complex protein g' connecting moiety provides a liposomal delivery complex may be connected to the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the liposom of the li
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    targeting efficiency. As a result of the binding between protein 6' and the Fc region of antibodies, protein G' shields the Fc regions of the attached antibodies from non-specific binding to cell-surfaces, other proteins, and anatomical structures. The present sequence represents an unidentified protein encoded by the same sequence which encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New liposome constructs comprising a liposome connected to an antibody, used, e.g. for delivery of cytotoxic agents to malignant cells \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a construct for connecting an antibody

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence S. pyogenes strain SF370 corresponding to residues 92-119. This fragment is useful in vaccine composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GRAB protein; protein G related alpha2M binding protein; vaccine; alpha2-macroglobulin; group A Streptococcus; GAS; antibiotic; immune response; Streptococcus pyogenes infection.

```
A 2.4kb HindIII fragment containing the entire coding sequence for Protein G was isolated from Streptococcus GX7805 using the 1.9kb Protein G coding sequence from Streptococcus GX7809. The Protein G has IgG-binding activity which has been localised to the B repeating structure. Streptococcal Protein G variants comprising the B domains are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant streptococcal protein G variants - useful for antibody detection and purification and for therapy

The bound protein is useful in purification and detection of Igs and fragments.

E.coli, and expressed at high levels.

The variants have a higher binding efficiency and capacity for immunoglobulin, and may be used for purifying, detecting and isolating antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                           19.9%; Score 155; DB 11; Length 593; llarity 56.1%; Pred. Gaps

```
Protein G gene product may be modified allowing the variant to be imobilised and exhibit different binding profiles. The bound protein is useful in purification and detection of 1gs and fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immobilised protein G variants - used for detection, isolation and purificn. immunoglobulin(s) and immunoglobulin fragments

                                                             ò
                                                                                                                        ö
is a fragment of GRAB protein from S. pyogenes strain SF370 corresponding to residues 34-91. This fragment is capable of binding alpha2M and useful in vaccine composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein G expressed by inserting the gene into an expression vector. A second vector may also be used as a cryptic helper plasmid to stably maintain the first plasmid in the host cell. Bacterial Fc receptors such as Protein G can be used to detect and purify antibodies, and in the treatment of disease. Fc receptors are useful to purify antibodies to be used in the purifice. of protein drugs and as therapeutics. High levels of Protein G can be obtd. in conditions favourable for isolation, using a non-pathogenic host. Suitable cloning vectors are lambda gtll, MI3mp9 and pGX1066.
                                                                                                                          Gaps

                                                                     The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective manner response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus, pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence the protein has alpha2M binding region and is useful in vaccine
New alpha2M binding protein for generating a protective immune response to group. A streptococcus and purifying the binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,

The patent discloses a new family of proteins termed GRAB (protein G

```
ö
related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is a lso useful for purifying alpha2M from a sample. The present sequence is a partial GRAB protein from S. pyogenes strain KTL9. The protein composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus, pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a frament of GRAB protein from S. pyogenes strain SF370 corresponding to residues 34-174. This fragment is devoid of the trans-membrane and cell wall anchor regions. It is useful in vaccine composition.
                                                                                                                    New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,

                                                                                                                                                                                                                                                                                                                                                           The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a partial GRAB protein from S. pyogenes strain API.

The protein has alpha2M binding region and is useful in vaccine
                                                                                                                                                                                                                                                            New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                      The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a full-length GRAB protein from S. pyogenes strain SF370.
                                                                                                                                                                                                                    New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein

The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2 macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a partial GRAB protein from S. Pyogenes strain KTL3.

The protein has alpha2M binding region and is useful in vaccine
New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 ALEALADQTDALQSEEAAVVKADNAASDALEALADQTDALQSEEAEVVQSDNAASDAWEK 120

        The patent discloses a new family of proteins termed GRAB (protein Grelated alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a fragment of GRAB protein from S. pyogenes strain SF370 corresponding to residues 34-192 and devoid of the membrane spanning region. This

                                                                                                                                                                                                                             The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2—macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a mature GRAB protein from S. pyogenes strain SF370 without the signal sequence. This sequence is capable of binding alpha2M and useful in vaccine composition.
                                                                                                    New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ALEALADQTDALQSEEAAVVKADNAASDALEALADQTDALQSEEAEVVQSDNAASDAWEK 120

Balanus amphitrite.

```
This is the coding sequence of the barnacle sixth adhesion protein. The protein was isolated from the cement secreted from the shell of barnacles. The protein can be used as an adhesive in water, and in wet environments.
                                                                                                                                                                                                         Barnacle sixth adhesion protein gene - useful as a raw material for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        XXXEXEXXXX
                                                                                                                                                                                                                                                                                                                                                   AAZ AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or part of an Escherichia coli flagellin protein except a protein expressed by E. coli H1, H7, H12 or H48 type strains. The presence of E. coli of a particular H serotype in a sample, comprising specifically of a particular H serotype in a sample, comprising specifically containing gene, specific for a particular flagellin gene associated with the H serotype, to any E. coli in the sample which contain the gene, and detecting any hybridised molecules, identifying the presence of that serotype in the sample. (I) are useful for: (I) detecting the presence of E. coli of H serotype in a sample by hybridising at least one or a pair of (I) to any E. coli in the sample and detecting the hybridised nucleic acid molecules; and (2) for detecting the presence of both or nucleic acid molecules. (I) is particularly useful for detecting the contain the contain the sample and detecting the hybridised nucleic acid molecules. (I) is particularly useful for detecting the contain the contain the sample and detecting the physiciased nucleic acid molecules. (I) is particularly useful for detecting the contain of O and H antigen. Hybridised (I) when using a pair of (I) is detected by polymerase chain reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2 AspAlaLeuGluAlaLeuAlaAspGlnThrAspAlaLeuGlnSerGluGluAlaAlaVal 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Escherichia coli flagellin protein nucleotide sequence SEQ ID NO:38.

AAZ56331 to AAZ56398 represent nucleic acid molecules (1) encoding all cart of an Escherichia coli flagellin protein except a protein except a protein cart of an Escherichia coli Hill Hy, Hill or Hill the strains. The present invention also describes a method of detecting the presence of E. coli of a particular H serotype in a sample, comprising specifically interested and electing and the presence of E. coli of H serotype, to any E.coli in the sample which contain the gene, specific for a particular flagelling appearance of the card detecting any hybridised molecules, identifying the presence of that serotype in the sample. (1) are useful for: (1) detecting the presence of that serotype in the sample. (1) are useful for: (1) detecting the presence of that serotype in the sample. (1) for detecting the presence of that serotype in the sample by hybridising at least one or a pair of in the sample and detecting the hybridised nucleic acid molecules; and (2) for detecting the presence of both O and H-serotypes of E. coli by hybridising at least one or a pair of (1) to any E. coli by hybridising at least one or a pair of (1) to any E. coli present in the sample and detecting the hybridised nucleic acid molecules. (1) is particularly useful for detecting the combination of O and H antigen. Hybridised (1) when using at least one (1) is detected by southern blot analysis and, when using a pair of (1), is detected by polymerase chain reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1126 GATGCAGCAAAATGGTTGCAATGTACCACCAACCGGTGGAAAGTATGGACAAGGCATTG 1185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 AspAlaLeuGluAlaLeuAlaAspGlnThrAspAlaLeuGlnSerGluGluAlaAlaVal 21
Novel nucleic acid molecule useful for the detection of flagellated bacterial strains in food, faeces, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sixth adhesion protein; barnacle; adhesive; wet environment; ss.
